Fürstenwalde

In 1993, the city of Fürstenwalde commissioned us to analyze the 16 former "military Bases" within their jurisdiction. A complete documentation of the existing properties was prepared, including building substance and usage, along with reports documenting contamination.

Proposals were made as to how to integrate the bases into the city including demolitions, conversions, and new usage.

Detailed studies were made including the preparation of the legally required development plans for two of these bases: Henry Hall (residential) and Langewahler Strasse (commercial and industrial)

These development plans regulate traffic access, infrastructure (gas, water, sewer), building area, height, density, and usage.
