Koepernicker Strasse

This 4 storey mixed-use building is the first to be constructed in the new development zone. Strategically located at the corner across from the train station and shopping center, the shape of the building reflects the acute angle of the site.

Shops are located on the ground floor, medical offices on the 1 st and 2 nd floors, and an apartment with a large terrace is located on the roof.

A curtain of blue Eternit panels wraps the upper floors, interrupted only by the glass of the lobby area. The glass itself is interrupted by the lift tower which serves to visually mark the entrance. The result is a very economical yet eye-catching building which will set the standard for the future development of the area.
